Tim Josef Tan

Mini-project 1 - React Task & Productivity Manager

Task Tracker

This app is used to view all the tasks from an API, view details of each task, and mark them as complete. You can also view the how many tasks are completed and assigned per user in the statistics tab.

Features:

Routes used:

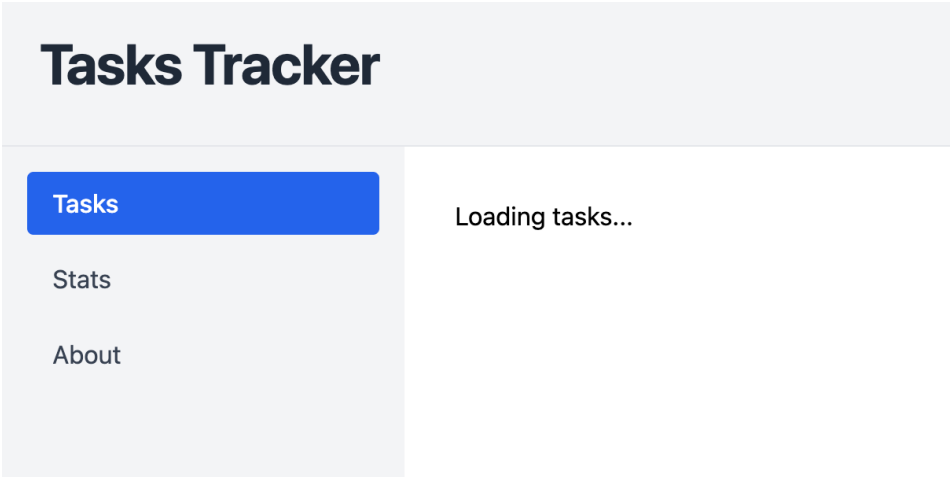

1. `<Route path='/tasks' element ={ <TasksList/>}> </Route>`
    - Api used:

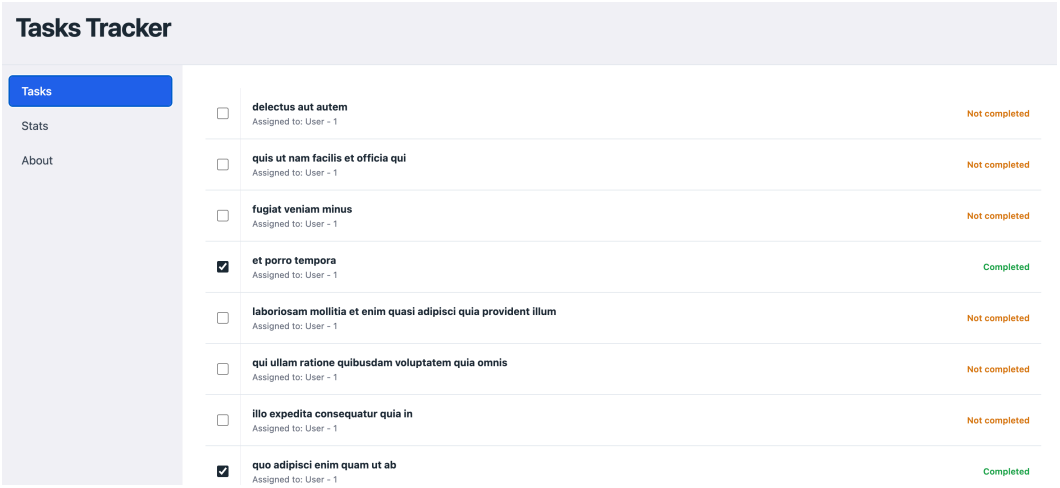

```
const PUBLIC_API_URL = 'https://jsonplaceholder.typicode.com/todos'
```

    - TanStack Query:

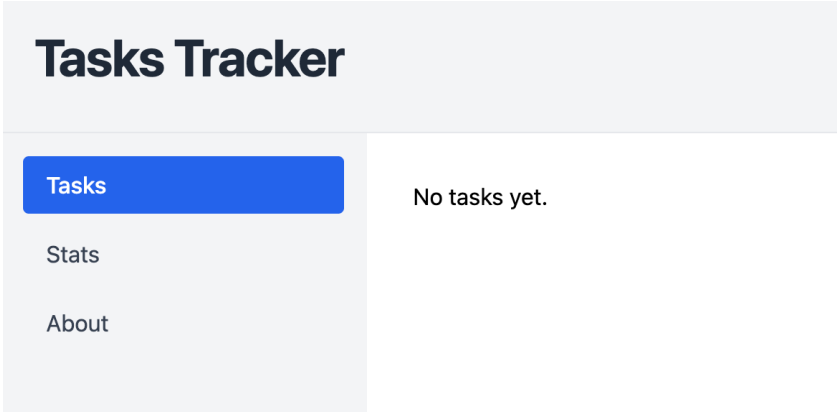

```
const { data: tasks = [], isLoading, isError } = useQuery({
  queryKey: ['tasks'],
  queryFn: fetchTasks,
  retry: false,
})
```

    - Loading / Error / Empty
      Slow

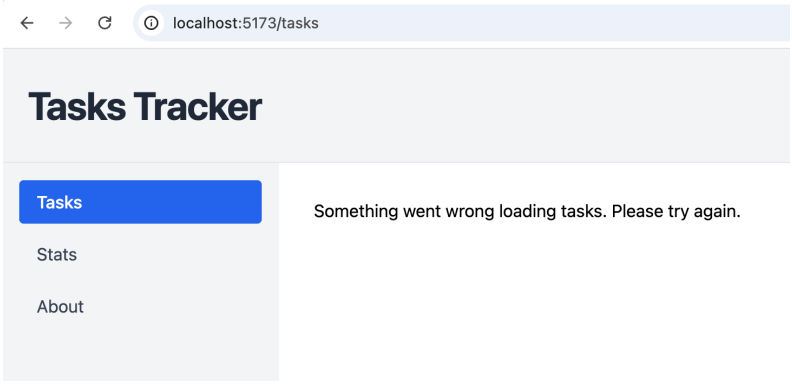

Empty

Error

Tech Stack Used:

React, React Router, TanStack Query, Tailwind CSS, Vite.

2.
```
<Route path="/tasks/:id" element ={<TaskDetail/>}></Route>
```

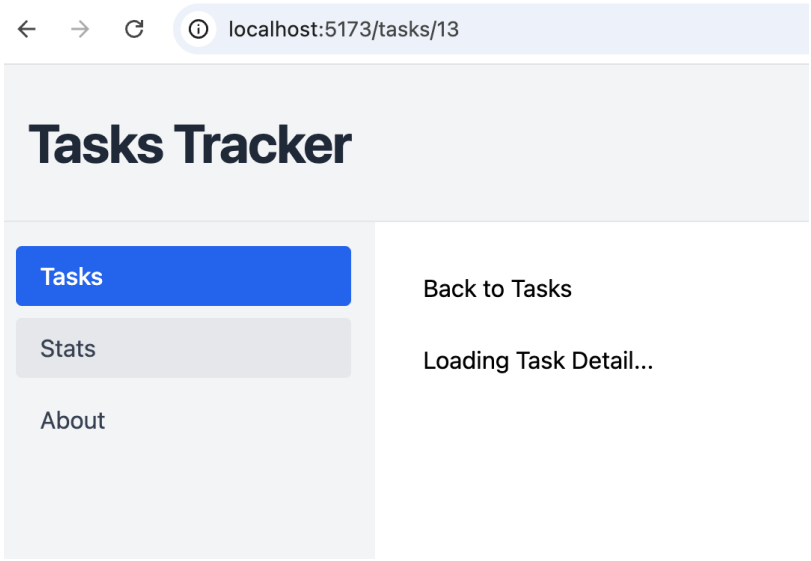

- API used:

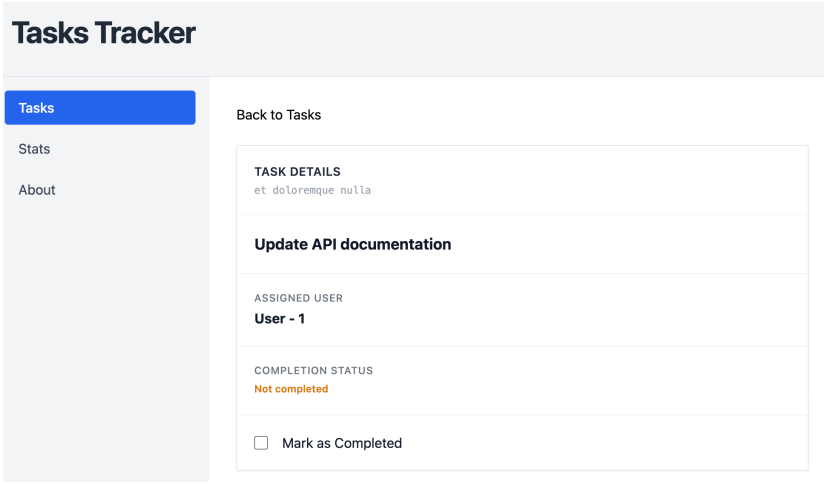

```
const response = await fetch(`https://jsonplaceholder.typicode.com/todos/${id}`)
```

- TanStack Query:

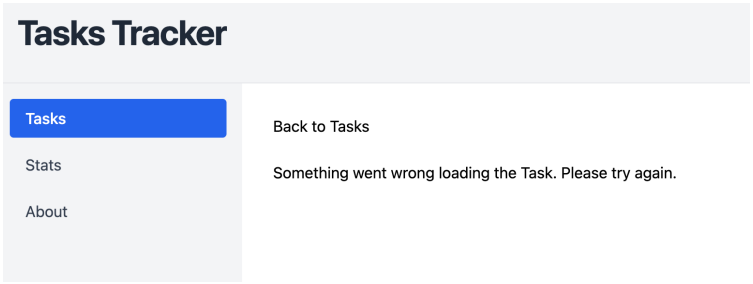

```
const {data: task, isLoading, isError, isSuccess} = useQuery({
    queryKey: ['task', id],
    queryFn: () => getTask(id),
    retry: false
});
```

- Loading:

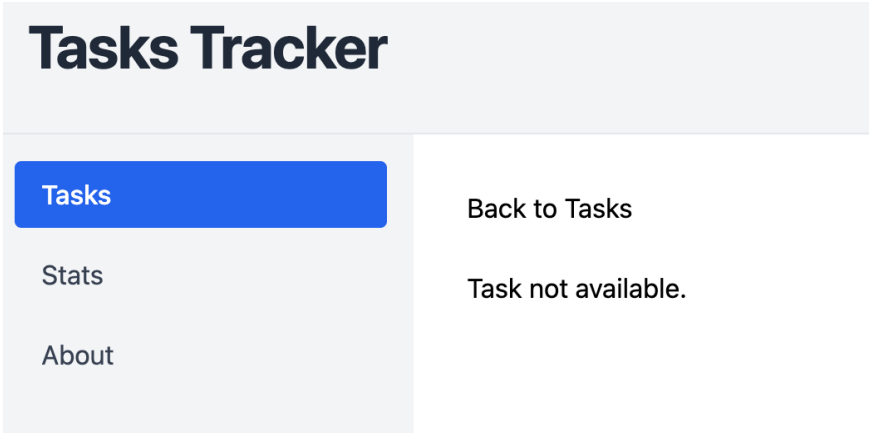

- Error:

- Empty

3. `<Route path='/stats' element ={ <StatList/>}> </Route>`

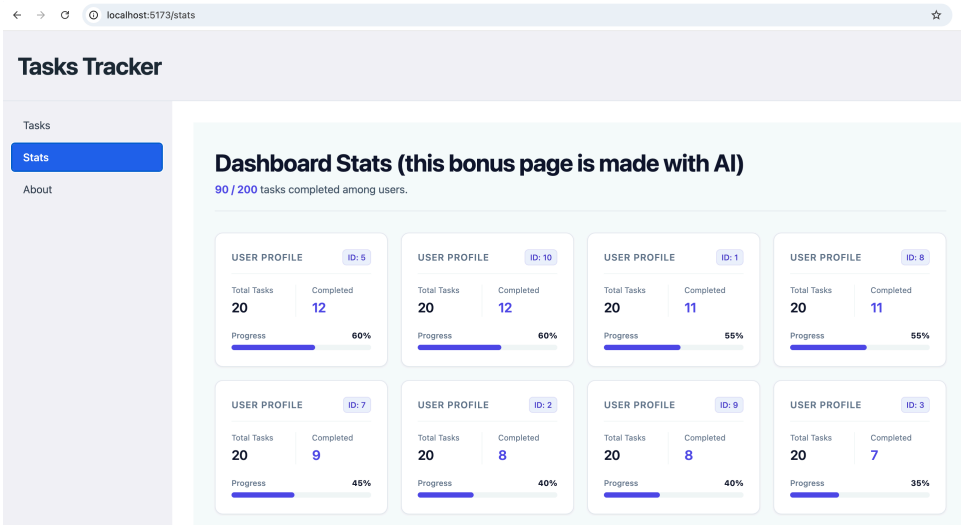

- API used:

```
const PUBLIC_API_URL = 'https://jsonplaceholder.typicode.com/todos'
```

- TanStack Query:

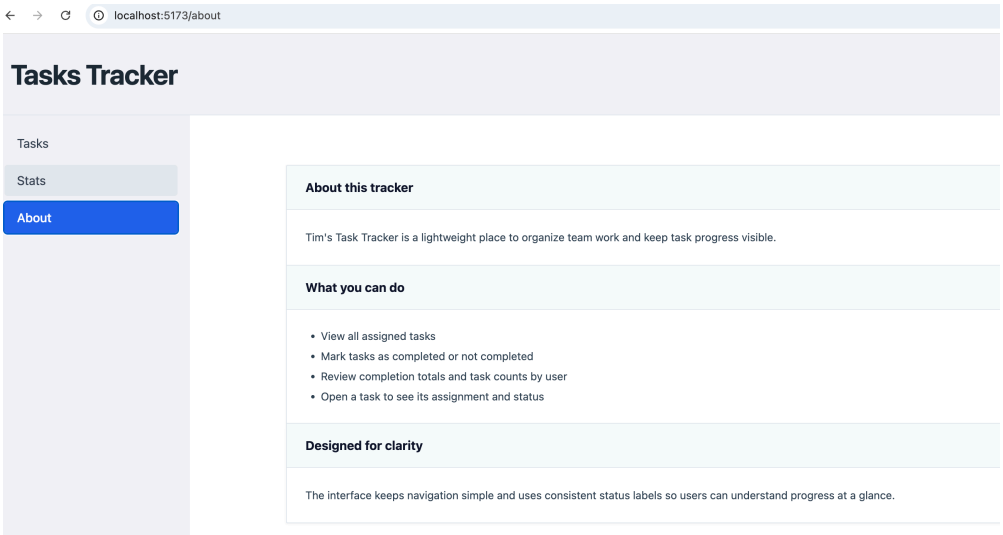

```
const PUBLIC_API_URL = 'https://jsonplaceholder.typicode.com/todos'
```

- Loading:

4.

```
<Route path='/about' element ={ <About/>}> </Route>
```

- 

Tech Stack Used:

- React

- React Router
- TanStack Query
- Tailwind CSS
- Vite
